

DHIS Vision

Timely, high-quality data guide public health decisions and actions

Our Focus Areas

Who We Are

Our Impact

Surveillance Programs & Systems

National Notifiable Diseases Surveillance System (NNDSS)

Learn how NNDSS defends America from health threats and why CDC is modernizing this critical notifiable diseases surveillance

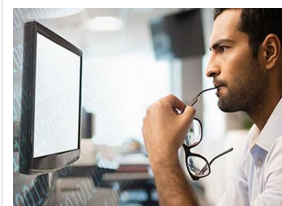

Electronic Case Reporting (eCR)

Learn how electronic case reporting (eCR) moves data quickly, securely, and seamlessly from electronic health records in healthcare facilities to public health agencies.

National Syndromic Surveillance Program (NSSP)

NSSP and its Biosense Platform advance the timely exchange of syndromic data to improve U.S. situational awareness and responsiveness to

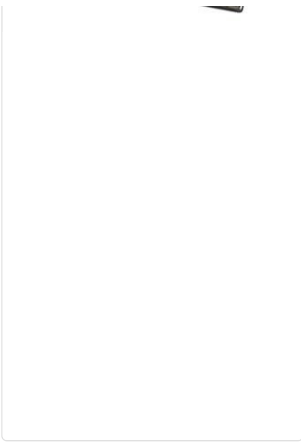

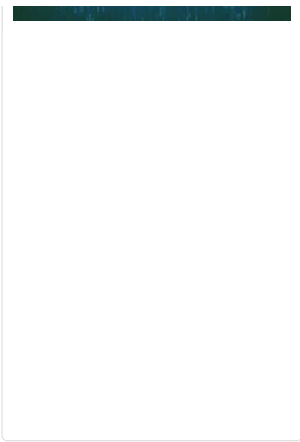

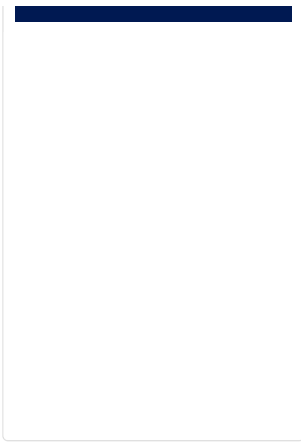

NEDSS Base System (NBS)

NBS is an integrated information system that helps local, state, and territorial public health departments manage reportable disease data and send notifiable disease data to CDC.
